

FAQ'S

*Packaging  
and Recycling*

## RECYCLING YOUR MEAL PACKAGING

### **Black Meal Trays**

Our meal trays are fully recyclable and can go right into your recycling bin. Certain recycling companies may not recycle our containers even though they are 100% recyclable. Our trays are a sustainable option as they are primarily made from recycled plastic, plastic bottles, and other sources which reduce carbon emissions by 50%. If your curbside recycling does not accept #5 plastic aka black polypropylene, refer to the Recycle Nation website to find a recycling center accepting #5 plastics for a convenient drop off location.

### **Plastic Shopping Bag**

These bags are fully recyclable as well. They are made of high-density polyethylene which is one of the most recycled plastics. Our bags are also perfect to be reused since they are sturdy and easy to handle, feel free to use them any way you see fit!

## RECYLING INFORMATION FOR CUSTOMERS RECEIVING SHIPPED MEALS

### **Shipping Box**

All of our corrugated boxes are made from partially recycled cardboard and are curbside recyclable.

### **Ice Packs**

Our ice packs are non-toxic and reusable. They can be easily rinsed off and reused. To dispose of the ice packs, simply cut open the film, throw the contents in the trash, and recycle the outer film where you recycle your plastic bags.

### **Box Insulation**

We rotate the insulation in our shipping boxes throughout the year to ensure proper food temperature during transit. In colder months, our paper insulation is fully recyclable and can go directly into your curbside recycling. In warmer months, we utilize bio-EPS insulation. While not fully recyclable, bio-EPS is a much greener alternative to Styrofoam because bio-EPS biodegrades fully in about 5 years.
